10、沿对角线调整1
Qt::SizeFDiagCursor

11、沿对角线调整2
Qt::SizeBDiagCursor

12、候选
Qt::UpArrowCursor

13、移动
Qt::SizeAllCursor

14、文本选择：
Qt::IBeamCursor

15、帮助选择
Qt::WhatsThisCursor

16、关闭手型
Qt::ClosedHandCursor

17、打开手型
Qt::OpenHandCursor

18、手型
Qt::PointingHandCursor

以下是Qt助手里面的内容：

A Note for X11 Users

On X11, Qt supports the  Xcursor library, which allows for full color icon themes. The table below shows the cursor name used for each Qt::CursorShape value. If a cursor cannot be found using the name shown below, a standard X11 cursor will be used instead. Note: X11 does not provide appropriate cursors for all possible Qt::CursorShape values. It is possible that some cursors will be taken from the Xcursor theme, while others will use an internal bitmap cursor.

Shape	Qt::CursorShape Value	Cursor Name	Shape	Qt::CursorShape Value	Cursor Name
	Qt::ArrowCursor	left_ptr		Qt::SizeVerCursor	size_ver
	Qt::UpArrowCursor	up_arrow		Qt::SizeHorCursor	size_hor
	Qt::CrossCursor	cross		Qt::SizeBDiagCursor	size_bdiag
	Qt::IBeamCursor	ibeam		Qt::SizeFDiagCursor	size_fdiag
	Qt::WaitCursor	wait		Qt::SizeAllCursor	size_all
	Qt::BusyCursor	left_ptr_watch		Qt::SplitVCursor	split_v
	Qt::ForbiddenCursor	forbidden		Qt::SplitHCursor	split_h
	Qt::PointingHandCursor	pointing_hand		Qt::OpenHandCursor	openhand
	Qt::WhatsThisCursor	whats_this		Qt::ClosedHandCursor	closedhand
	Qt::DragMoveCursor	dnd-move or move		Qt::DragCopyCursor	dnd-copy or copy
	Qt::DragLinkCursor	dnd-link or link			

enum Qt::CursorShape

This enum type defines the various cursors that can be used.

The standard arrow cursor is the default for widgets in a normal state.

Constant	Value	Description
Qt::ArrowCursor	0	 The standard arrow cursor.
Qt::UpArrowCursor	1	 An arrow pointing upwards toward the top of the screen.
Qt::CrossCursor	2	 A crosshair cursor, typically used to help the user accurately select a point on the screen.
Qt::WaitCursor	3	 An hourglass or watch cursor, usually shown during operations that prevent the user from interacting with the application.
Qt::IBeamCursor	4	 A caret or ibeam cursor, indicating that a widget can accept and display text input.
Qt::SizeVerCursor	5	 A cursor used for elements that are used to vertically resize top-level windows.
Qt::SizeHorCursor	6	 A cursor used for elements that are used to horizontally resize top-level windows.
Qt::SizeBDiagCursor	7	 A cursor used for elements that are used to diagonally resize top-level windows at their top-right and bottom-left corners.
Qt::SizeFDiagCursor	8	 A cursor used for elements that are used to diagonally resize top-level windows at their top-left and bottom-right corners.
Qt::SizeAllCursor	9	 A cursor used for elements that are used to resize top-level windows in any direction.
Qt::BlankCursor	10	A blank/invisible cursor, typically used when the cursor shape needs to be hidden.
Qt::SplitVCursor	11	 A cursor used for vertical splitters, indicating that a handle can be dragged horizontally to adjust the use of available space.
Qt::SplitHCursor	12	 A cursor used for horizontal splitters, indicating that a handle can be dragged vertically to adjust the use of available space.
Qt::PointingHandCursor	13	 A pointing hand cursor that is typically used for clickable elements such as hyperlinks.
Qt::ForbiddenCursor	14	 A slashed circle cursor, typically used during drag and drop operations to indicate that dragged content cannot be dropped on particular widgets or inside certain regions.
Qt::OpenHandCursor	17	 A cursor representing an open hand, typically used to indicate that the area under the cursor is the visible part of a canvas that the user can click and drag in order to scroll around.
Qt::ClosedHandCursor	18	 A cursor representing a closed hand, typically used to indicate that a dragging operation is in progress that involves scrolling.
Qt::WhatsThisCursor	15	 An arrow with a question mark, typically used to indicate the presence of What's This? help for a widget.
Qt::BusyCursor	16	 An hourglass or watch cursor, usually shown during operations that allow the user to interact with the application while they are performed in the background.
Qt::DragMoveCursor	20	A cursor that is usually used when dragging an item.
Qt::DragCopyCursor	19	A cursor that is usually used when dragging an item to copy it.
Qt::DragLinkCursor	21	A cursor that is usually used when dragging an item to make a link to it.
Qt::BitmapCursor	24

楼主，最近在修改一个橡皮的自定义鼠标样式，定义为一个可控制大小的圆圈，可是不知道为什么老是不完整的圆。。。求解

竹下笋

美图秀秀里面那样的橡皮擦，可以设定像素大小的。那个圆圈，我这边画出来圆圈始终是不完整的
